Children lead active, jam-packed lives. But whether they’re playing pretend, riding bikes with their friends, or learning new things at school, myopia (short-sightedness) can make it harder for them to engage in the activities they love. And as they grow, their prescription may get stronger too.

Fortunately, your child may be able to benefit from an innovative technology to help make his or her life easier and help slow down the progression of their myopia:\footnote{1} MiSight® 1 day contact lenses from CooperVision. MiSight 1 day with ActiveControl® Technology not only correct short-sightedness – they’re also the first soft contact lenses proven to significantly reduce the progression of myopia in children.\footnote{1} When wearing MiSight contact lenses, your child can experience clear vision, freedom from glasses and continue to enjoy the activities they love.\footnote{1,2,3}

Features & Benefits

\begin{itemize}
  \item Correct and slows the progression of short-sightedness in children by 59\%, utilizing special ActivControl® Technology.\footnote{1}
  \item The confident choice for your child. Of children aged 8-15, who had never worn contact lenses before:
    \begin{itemize}
      \item 90\% of children said they preferred wearing their MiSight 1 day contact lenses over wearing their glasses.\footnote{1}
      \item 90\% of children were able to insert and remove MiSight 1 day lenses on their own.\footnote{1}
    \end{itemize}
  \item Child-friendly, soft contact lenses that are easy-to-use.\footnote{1}
  \item Convenient daily disposable contact lenses – no need to clean or store them.
\end{itemize}
